PRANAV MUKUND DESHMUKH

Artificial Intelligence & Data Science Engineering Student

Email: pranavdeshmukh2910@gmail.com | Location: Shirpur, Maharashtra, India
LinkedIn: linkedin.com/in/pranav-deshmukh-043789339 | GitHub: github.com/Pranavdeshmukh2910

CAREER OBJECTIVE & PROFESSIONAL SUMMARY

Enthusiastic and driven Artificial Intelligence and Data Science Engineering undergraduate with a strong foundation in machine learning algorithms, deep learning, statistical data analysis, and software development. Dedicated to developing intelligent, real-world technological solutions and seeking impactful internship and software engineering opportunities to contribute and grow.

EDUCATION

Bachelor of Technology (B.Tech) - Artificial Intelligence & Data Science **2022 - 2026 (Expected)**

R.C. Patel Institute of Technology, Shirpur, Maharashtra

Relevant Coursework: Data Structures & Algorithms, Machine Learning, Deep Learning, Database Management Systems (SQL), Natural Language Processing, Object-Oriented Programming (Java/C++), Probability & Statistics.

TECHNICAL SKILLS

Programming Languages:	Python, Java, C++
AI & Machine Learning:	Machine Learning, Deep Learning, Natural Language Processing (NLP), Computer Vision
Data Science & Analytics:	NumPy, Pandas, Matplotlib, Exploratory Data Analysis (EDA), Feature Engineering
Databases & Storage:	SQL, MySQL, Relational Database Management
Developer Tools & Platforms:	Git, GitHub, VS Code, Jupyter Notebook, Linux / CLI

KEY TECHNICAL PROJECTS

Smart Resale Price Prediction for Mobile Phones | *Python, Scikit-Learn, Pandas* **AI / ML Regression**

- Designed an end-to-end regression model to estimate fair market resale values based on phone specifications, brand depreciation, and hardware conditions.
- Implemented feature engineering, handled outliers, and evaluated multiple regression algorithms (Random Forest, Gradient Boosting) achieving high predictive accuracy.

Predicting Progression of Diabetic Retinopathy from Retinal Scans | *PyTorch, CNN, OpenCV* **Deep Learning / CV**

- Developed a deep convolutional neural network (CNN) pipeline to identify and categorize severity stages of diabetic retinopathy from fundus retinal photographs.
- Applied image preprocessing, contrast enhancement, and transfer learning to assist in early medical diagnostic screening.

Smart Exam Seating Arrangement System | *Python, Greedy & Backtracking Algorithms* **Algorithms / Optimization**

- Built an automated constraint satisfaction system to allocate examination seats across multiple branches without adjacent peer collisions.
- Integrated greedy heuristic sorting and backtracking algorithms to optimize hall capacity and generate conflict-free seating maps in seconds.

Automated Student Attendance Monitoring & Analytics System | *OpenCV, Python, SQLite* **Computer Vision & Analytics**

- Developed a facial recognition-based automated attendance tracker that logs real-time student entries into a centralized database.
- Built analytics dashboard tracking student attendance percentages, irregularity alerts, and downloadable summary reports.

ACHIEVEMENTS, WORKSHOPS & CERTIFICATIONS

- Active problem solver on competitive programming platforms with a focus on Data Structures & Algorithms.
- Participated in college and inter-collegiate technical hackathons, building AI and software prototypes under tight deadlines.
- Completed hands-on training workshops in Artificial Intelligence, Machine Learning pipelines, and modern web application development.
